

## February 2016

**Standard Nutrient Values for Fruit Juices:** in order to bring more clarity regarding the purpose of the 'AIJN Standard Nutrition Values for fruit juices', a new paragraph "USAGE OF THIS GUIDELINE" was added to the introduction.

**AIJN COP General Comments:** a new paragraph "Modern sensitive analytical techniques" was added.

**AIJN definition fruit derived sugar:** a couple of modifications were made to improve the definition.

**Provisional Brix levels of Vegetables Juices:** a special Brix level for beetroot juice from the UK was set (Brix juice/purée - 6.5; Brix juice from concentrate - 9.0)

**Guideline for Vegetable Juices&Nectars:** the document was expanded with a new section with Provisional Brix levels

**Lime Reference Guideline:** new RG. Published in February 2016 as Provisional.

**Provisional Cranberry RG:** separation of *V. macrocarpon* and *V. oxycoccus*; modification of values for Ca (40-160 mg/l for VM; 90-200 mg/l for VO) and K (650-1200 mg/l for VO and 600-1000 mg/l for VM).

**Provisional Brix and Relative Density:** the entry for 'Lime' was deleted since a new Lime RG is now available.
