

December 2014

Titrateable acidity: the way of expressing this parameter was modified in all RGs (except in the Guava short RG). At the COP meeting of September 2014, the experts agreed to delete 'mval' and express this parameter according to SI units, and thus in '**mmol H⁺/l**'. Since there was no modification to the ranges, it was decided not to change the date of each individual RG to '*version of Dec 2014*' but to keep the date of the document as the date of the last modification (i.e. modification of values, or additions/deletions) in order to avoid confusion to the COP users.
