

**November 2014**

**Provisional Brix and relative density:** the entries for ARONIA, CRANBERRY and KIWI were deleted because Provisional RGs for these fruits have been adopted.

**Brix value in the RGs for Guava, Mango, Passion fruit and Blackcurrant:** the following remark was inserted at the end of the introductory part

*The data used in the preparation of the Reference Guideline is based on authentic data from main production areas, and across multiple seasons. A critical assessment of the Brix values for (fruit name) has been undertaken which supports the values contained in the Reference Guideline. The values in the Fruit Juice Directive reflect the values for this fruit in the Codex Alimentarius.*
